

Instructions for using the Table Gallery Visual + Template

To create an optimized layout for mobile viewers, we created a separate mobile table. This means you need to update your data and design in both tables to ensure accuracy and consistency. To do this, follow these steps:

- Edit the core table on the page. Add in your data and adjust the design accordingly.
- Turn on the Selection Pane by clicking View -> Selection.
- Select the visual called “mobile – table” (hidden behind the main table so that desktop viewers don’t see it)
- Edit the mobile table to match the data displayed in your core table or to represent a smaller set of data (recommended no more than 5 fields) so that it is easy to consume on mobile.
- Be sure to update your data source and create a consistent design across both tables.

It’s as easy as that! Reach out if you have any further questions.
